# Inhalt.

# Einleitung.

## I. Allgemeine Vorbemerkung.

In dem Ein- und Verkaufe des Getreides gilt der Erfahrungsatz, daß bei vollständiger Marktfähigkeit der Waare, dieselbe um so werthvoller ist, je mehr sie wiegt. Daher begnügen sich vorsichtige Käufer und Verkäufer nicht damit, die Qualität des Getreides blos nach dem äußeren Ansehen, nach der Farbe, nach dem Geruche und nach dem Griffe zu beurtheilen, sondern sie erheben gleichzeitig das Gewicht eines Schäffels, Malters u. s. f., d. h., dessen Volumgewicht, und bestimmen den Schäffel- oder Centnerpreis entweder unter stillschweigender Zugrundlegung jenes Volumgewichtes, oder unter der vertragsmäßigen Bestimmung, daß der Schäffel, das Malter der Lieferung genau so und so viel wiegen müsse.

Der Verkauf des Getreides nach dem bloßen Maße ist übrigens in hohem Grade unsicher und zeitraubend, daher zu erwarten steht, daß der Gewichtsverkauf in kürzester Frist allgemein Eingang finden wird; nur muß dahin gestrebt werden, daß sämmtliche Betheiligte durch Aufstellung besonderer Getreide- oder Probirwagen in den Börsen- und Schrannenlokalen Gelegenheit erhalten, das Volumgewicht des Getreides erheben, und darnach den Centnerpreis richtig schätzen zu können. Da nun das neue Maas und Gewicht mit dem 1. Januar 1872 Gesetzeskraft erhält, so ist es angezeigt, als Getreidewage, oder Probir-

wage behufs Bestimmung des Volumgewichtes die Literwage zu wählen. Es ist dieß eine einfache zweiarmige Wage, deren Waarenschale genau dem Liter mit den gesetzlichen Dimensionen entspricht, während die andere Schale zum Einlegen der Grammgewichte dient. Um bei den Probewägungen jederzeit eine gleichförmig dichte Füllung des Litergemäßes zu erreichen, was bekanntlich bisher immer von der Fertigkeit und Gewissenhaftigkeit der Fruchtmesser abhängig war und den Handel nach dem Maße (Schäffel, Malter) so unsicher machte, befindet sich bei der Literwage ein Trichter mit Sperrvorrichtung, dessen man sich zur gleichmäßigen Füllung immer bedient. Ist das Litergewicht erhoben, und der Centnerpreis vereinbart, so kann die Abwägung des ganzen Quantums auf jeder Brückenwage geschehen.

Vorzügliche Literwagen für den Getreidehandel liefert Fabrikant Wehefritz in Nürnberg, siehe Umschlag.

Nunmehr übergehend zur Schätzung des Centnerpreises nach dem Volumgewichte, so haben vielfache Vergleiche der Schäffelpreise, Probewägungen und Reduktionen den Satz bestätigt, daß bei wirklich reellem Geschäftsgange die Centnerpreise sich verhalten wie die Volumgewichte.

Wir wollen diesen Satz an einem Beispiele klar machen.

An einem Schrannentage wurden notirt:

| | | | | |
|---|---|---|---|---|
| 1. | Kauf per b. Schäff. Waizen | 19 fl. 28 kr. | Gewicht | 322 Zoll℔ |
| 2. | „ „ „ „ „ | 21 „ 3 „ | „ | 335 „ |
| 3. | „ „ „ „ „ | 23 „ 39 „ | „ | 355 „ |
| 4. | „ „ „ „ „ | 24 „ 35 „ | „ | 362 „ |

Hienach kostet der Zollzentner:

ad 1) $\frac{19,46 \times 100}{322} = 6,043$ fl. oder 6 fl. 2 kr.

ad 2) $\frac{21,06 \times 100}{335} = 6,287$ fl. oder 6 fl. 17 kr.

ad 3) $\frac{23,65 \times 100}{355} = 6,662$ fl. oder 6 fl. 39 kr.

ad 4) $\frac{24,59 \times 100}{362} = 6,793$ fl. oder 6 fl. 47 kr.

Bei näherer Untersuchung dieser Resultate findet man aber den Satz bestätigt, daß sich die Centnerpreise verhalten wie die Volumgewichte, denn es ergibt sich

$$6{,}043 : 6{,}287 : 6{,}662 : 6{,}793 = 322 : 335 : 355 : 362.$$

Diese Resultate stimmen auch mit der Wirklichkeit ganz gut und ist man um so mehr berechtigt, den mehrerwähnten Satz auf die Praxis anzuwenden, als die Wissenschaft vorerst noch kein Gesetz gefunden hat, welches obige empirische Formel widerlegen könnte.

Hierauf ist nun der Getreidepreisrechner nach metrischem Maß und Gewicht gegründet. Er hat den Zweck, dem richtigen Gewichtsverkaufe, unter Anwendung des metrischen Systems auf den Getreideverkehr die Bahn zu brechen, indem er in tabellarischer Form den jeder Conjunktur entsprechenden Centnerpreis, berechnet nach dem Volumgewicht, (Liter-, resp. Hektoliter-Gewicht) enthält, so daß es Jedermann möglich ist, nach vorher erhobenem Liter- oder Hektolitergewicht seiner marktfähigen Waare, deren Werth per Centner oder 50 Kilogramm mittelst der Tabellen leicht zu schätzen.

Unter dem mehrfach gebrauchten Ausdrucke, marktfähige Waare, dürfte solches Getreide zu verstehen sein, welches hinsichtlich der Reinheit, der Farbe, des Geruches und Griffes, allen billigen Anforderungen entspricht.

## II. Einrichtung des Getreidepreis-Rechners.

Der Getreidepreis-Rechner ist zunächst für die vier Hauptgetreidegattungen, Waizen, Roggen, Gerste und Hafer entworfen.

Nach sorgfältigen Erhebungen wurden der Berechnung folgende Volumgewichte zu Grunde gelegt:

| | Waizen. | | Roggen. | | Gerste. | | Hafer. | |
|---|---|---|---|---|---|---|---|---|
| | Gewicht per | | Gewicht per | | Gewicht per | | Gewicht per | |
| | Liter Gram. | Hektoliter Zollpfd. | Liter Gram. | Hektoliter Zollpfd. | Liter Gram. | Hektoliter Zollpfd. | Liter Gram. | Hektoliter Zollpfd. |
| Minim. | 700 | 140 | 650 | 130 | 600 | 120 | 375 | 75 |
| Maxim. | 850 | 170 | 800 | 160 | 750 | 150 | 525 | 105 |

Die Litergewichte, aufsteigend von 5 zu 5 Grammen bilden die erste Rubrik, die Hektolitergewichte aufsteigend von Pfund zu Pfund, die zweite Rubrik einer jeden Tafel, deren es für Waizen, Roggen und Gerste je 25, für Hafer 20 sind.

Hundert Liter bilden ein Hektoliter; 500 Gramme bilden ein Zollpfund. Jedem Litergewicht entspricht das rechts nebenstehende Hektolitergewicht, so daß Liter- oder Hektoliterwagen angewendet werden können. Der übrige Raum einer jeden Tafel enthält die Centnerpreise in je zehn Skalen. Als Minimalcentnerpreise wurden angenommen:

für Waizen 4 fl. 30 kr.; für Roggen 2 fl. 30 kr.;
für Gerste 2 fl. — kr.; für Hafer 1 fl. 45 kr.

und dieselben als Anfangspreise je in die erste Skale dem zugehörigen Minimalgewichte beigesetzt. Sämmtliche Preisskalen sind mit fetten Ziffern fortlaufend nummerirt und steigen die Centnerpreise der Minimalgewichte kreuzerweise auf, nämlich in je 250 Skalen:

| | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| bei dem | Waizen | von | 4 | fl. | 30 | kr. | bis | zu | 8 | fl. | 39 | kr., |
| „ „ | Roggen | „ | 2 | „ | 30 | „ | „ | „ | 6 | „ | 39 | kr., |
| „ der | Gerste | „ | 2 | „ | — | „ | „ | „ | 6 | „ | 9 | kr., |
| „ dem | Hafer | „ | 1 | „ | 45 | „ | „ | „ | 5 | „ | 4 | kr. |

Letzterer umfaßt nur 200 Preisskalen.

Die Berechnung der den einzelnen Volumgewichten entsprechenden Centnerpreise geschah nun unter Anwendung des aufgestellten Satzes, daß sich die Centnerpreise verhalten wie die Volumgewichte, (Liter oder Hektolitergewichte) beispielsweise wie folgt:

Betrachtet man die Waizenskale 1, in welcher dem Litergewicht von 700 Grammen, oder dem Hektolitergewicht von 140 Pfund ein Centnerpreis von 4 fl. 30 kr. entspricht, so findet man den Centnerpreis für ein Litergewicht von 850 Grammen, oder für ein Hektolitergewicht von 170 Pfund durch folgende Proportionen:

$$700 : 850 = 4{,}5 : X \quad \text{oder:} \quad 140 : 170 = 4{,}5 : X$$

hieraus ergibt sich:

$$X = \frac{4{,}5 \times 850}{700} = \frac{4{,}5 \times 170}{140} = 5{,}46 \text{ fl.} = 5 \text{ fl. } 28 \text{ kr.}$$

als höchster Centnerpreis der 1. Waizenskale.

Mit Hilfe ähnlicher Proportionen läßt sich die Richtigkeit aller übrigen Centnerpreise nachweisen.

## III. Gebrauch des Getreidepreisrechners.

Der Gebrauch des Getreidepreisrechners dürfte am einfachsten aus folgenden Beispielen erhellen:

1. Beispiel: Eine Waizensorte von 720 Gramm Litergewicht wird per Centner mit 6 fl. 5 kr. bezahlt, wie hoch berechnet sich der Centnerpreis bei 775 Gramm Litergewicht?

   Antwort: Den Centnerpreis von 6 fl. 5 kr. für die erste Waizensorte mit 720 Gramm Litergewicht, finden wir in der 9. Waizentafel Zeile 5 Skale 86 und den gesuchten Centnerpreis für 775 Gramm Lichtergewicht auf derselben Tafel Zeile 16 Skale 86 mit 6 fl. 33 kr.

2. Beispiel: Eine Waizensorte, welche per Centner mit 6 fl. 24 kr. bezalt wurde, ergibt ein Litergewicht von 795 Gramm; wie groß soll das Litergewicht eines Waizens sein, für welchen per Centner 5 fl. 46 kr. verlangt wird?

Antwort: den Centnerpreis von 6 fl. 24 kr. mit einem Litergewicht von 795 Gramm findet man auf der 7. Waizentafel Zeile 20 Skale 70 und in derselben Skale, Zeile 4 ist für den Centnerpreis von 5 fl. 46 kr. das gesuchte Litergewicht mit 715 Gramm vorgetragen.

3. Beispiel: Eine Roggensorte von 685 Gramm Litergewicht wird per Centner mit 4 fl. 31 kr. bezalt, wie viel ist eine andere Sorte mit 747 Gramm Litergewicht werth?

Antwort: Der Centnerpreis von 4 fl. 31 kr. bei 685 Gramm Litergewicht findet sich auf der 11. Roggentafel Zeile 8 Skale 108. In derselben Skale ist der Centnerpreis zu suchen, welcher dem Litergewicht von 747 Gramm entspricht. Letzteres ist der Mittelwerth von 745 Gramm (Zeile 20) und 750 Gramm (Zeile 21) mit dem zugehörigen Centnerpreis von 4 fl. 56 kr.

4. Beispiel: Ein Brauer kauft Gerste mit 680 Gramm Litergewicht und bezalt hiefür per Centner 4 fl. 12 kr.; gleichzeitig werden ihm zwei weitere Sorten von guter Qualität mit 668 Gramm und 710 Gramm Litergerwicht angeboten. Wie hoch wird er den Centnerpreis beider Sorten taxiren?

Antwort: Entsprechend 680 Gramm Litergewicht findet man den Centnerpreis von 4 fl. 12 kr. auf der 11. Gerstentafel Zeile 17 Skale 114; in derselben Skale ist der Centnerpreis für 668 Gramm Litergewicht mit 4 fl. 7 kr. und der Centnerpreis für 710 Gramm Litergewicht mit 4 fl. 23 kr. eingetragen.

5. Beispiel: Der Militärverwaltung N. N. werden 3 Sorten guter Hafer zu 435, 455 und 490 Gramm Litergewicht offerirt und sollen nach Verhältniß eines Musters von 460 Gramm Litergewicht, wofür per Centner 4 fl. 48 kr. bezahlt wurde, übernommen werden; wie hoch ist der Centner jeder Sorte anzuschlagen?

Antwort: Der Centnerpreis von 4 fl. 48 kr. für 460 Gramm Litergewicht ist auf der 14. Hafertafel Zeile 17, Skale 132 zu suchen; in derselben Skale findet man für 435 Gramm 4 fl. 33 kr., für 455 Gramm 4 fl. 45 kr., für 490 Gramm 5 fl. 7 kr. per Centner.

## IV. Abfassung der Marktberichte.

Je näher durch die rasche Entwicklung der Verkehrsanstalten die Produktions- und Handelsplätze sich rücken, desto größer wird die Concurrenz im Getreidegeschäfte und desto mehr empfindet man die Nachtheile, welche die bisherige verschiedenartige und zum Theil mangelhafte Abfassung der Marktberichte mit sich bringt.

Die norddeutschen Berichte, z. B. die von Berlin, enthalten theils die Preise per Schäffel zu 54,96 Liter, theils für ein constantes Gewicht per Wispel zu 1319,04 Liter, das für Waizen zu 2100 Zollpfund, für Roggen zu 2000 Zollpfund, für Gerste zu 1750 Zollpfund, für Hafer zu 1200 Zollpfund, festgesetzt ist.

Erfurt veröffentlicht die Wispelpreise mit Angabe des Gewichtes per preuß. Schäffel in folgender Form:

Waizen per Schäffel 84—86 Pfund 77—81 Thaler per Wispel.

Aus Prag lauten die Berichte beispielsweise:

| | | Metzen | pfündig | Centnerpreis in öst. Währ. |
|---|---|---|---|---|
| 997 Metzen Waizen | I. | 694 | 84—87 | 5,90—6,33 fl. |
| | II. | 303 | 80—83 | 5,50—5,88 fl. |

Diesen Angaben sind österr. Metzen zu 61,5 Liter und österr. Pfunde zu 1,12 Zollpfund zu Grunde gelegt.

Auf den süddeutschen Plätzen wird theils nach dem Volumen (1 bayer. Schaff = 222,36 Liter; 1 württemb. Schäffel = 177,23 Liter, 1 badisches Malter = 150 Liter; 1 hessisches Malter = 128 Liter) theils nach dem einfachen oder doppelten Zollcentner gehandelt und berichtet.

Nach Form wie Inhalt gehen diese Berichte der Art auseinander, daß man ohne zeitraubende Reduktionen nie im Stande ist, sich ein klares Urtheil über den Gang des Getreidegeschäftes zu bilden.

Zur Gewährung eines sicheren und raschen Ueberblickes dürften mit Einführung des metrischen Maßes und Gewichtes die Marktberichte für Süddeutschland nach folgendem Muster abgefaßt werden.

| Fruchtgattung. | Zufuhr. Ctr. | Verkauft. Ctr. | Litergewicht Gramme | Centnerpreis. |
|---|---|---|---|---|
| 1. Waizen. | 1260 | 1140 | 715—805 | 5 fl. 56 kr.—6 fl. 40 kr. |
| 2. Roggen. | 932 | 746 | 660—735 | 4 fl. 24 kr.—4 fl. 54 kr. |
| 3. Gerste. | 1048 | 1048 | 625—695 | 3 fl. 39 kr.—4 fl. 3 kr. |
| 4. Hafer. | 867 | 712 | 405—490 | 4 fl. 3 kr.—4 fl. 54 kr. |

Bemerkung:

ad 1. Waizentafel Nr. 8, Skale 80.
ad 2. Roggentafel Nr. 12, Skale 111.
ad 3. Gerstentafel Nr. 10, Skale 92.
ad 4. Hafertafel Nr. 13, Skale 121.

In der Hand der schrannenberechtigten Magistrate und der Börsenvorstände liegt es zunächst, durch entsprechende Einrichtungen und Vorschriften der hier vorgeschlagenen rationellen Verkaufsweise Eingang zu verschaffen und durch gleichförmige, leichtfaßliche Marktberichte in das Getreidegeschäft endlich die Klarheit und bequeme Uebersicht zu bringen, die man bisher nicht ohne großen volkswirthschaftlichen Nachtheil so schwer vermißte.

Möchten aber auch die Lehrer der niederen und höheren Schulen, die Vorstände der landwirthschaftlichen und gewerblichen Vereine und zumal die Verwaltungsbehörden bestrebt sein, mit Wort und That das richtige Verständniß des Getreidepreisrechners zu fördern, damit der Segen des langersehnten einheitlichen Maßes und Gewichtes recht bald zur vollen Wahrheit werde.

Ansbach, im Monat Oktober 1870.
